## Filaria Elimination Drive 2023-2024

Grade Nur-XII

Date: 05/04/2024

Dear Parents,

Greetings from MLZS, Chandrapur!!!!!!!

Lymphatic Filariasis (Elephantiasis) is spread by infected mosquitoes. Their bites deposit a parasite that travels to the lymph system. Most cases are symptom less. Rarely, long-term damage to the lymph system, causes swelling in the legs, arms, hand, genitalia. It also increases the risk of frequent bacterial infections that harden and thicken the skin.

The combination dose of drugs, namely IDA (Ivermectin, DAC and Albendazole ) taken once yearly will kill the parasites. As part of Filariasis elimination drive, primary health care workers will administer the drugs to children from 3-18 years of age in school campus, under the supervision of Medical Officer and school staff.

**Date of Administration: Saturday, 13 April, 2024**

**Time: 9:30am to 10:30 am for Pre-primary**

**10:30am- 12:30 pm for Primary (after their respective examination).**

**Venue: Auditorium**

We are sending a consent form regarding the oral tablets to be given in school. Kindly fill in the consent form and send on or before **Monday, 08 April, 2024.**

Best Regards,

Peter Pereira
